

I printed the fan Radial Housing, fits great. First thing I did was to put a small piece of tape over the holes (6) from the led side with a tooth pick place a small amount of Loctite Stik'n Seal, at auto parts stores. This stuff needs to cure overnight, it's real sticky.

Next a small dab of silicone to seal the wires.

It does not show, but I covered the whole top with a layer of kapton tape to seal Tricklaser to housing.
